## I Description of Site: (Optional)

Describe the history and present conditions of the site. Give directions to the site and describe any nearby wells, springs, lakes, or housing. Include such information as how waste was disposed and where the waste came from. Provide any other information or comments which may help describe the site conditions.

Solid wastes resulting from the neutralization with lime, (magnesium and calcium oxide) of sulfuric acid used in drug manufacturing were deposited in valley on subject property in the early 1950's. After about 1952 area was not used again until about 1960. At this time chemical manufacturing was entered into and solid wastes were deposited until 1976 in this valley. At this time the waste, neutralized with lime, consisted of magnesium and calcium sulfate, and chromium III carbonates, and oxides. The process was monitored from time to time for the presence of chromium VI and the amount was below the detectable limit.

There are no wells, springs or lakes within 1/2 mile of the area. The closest housing is about 700 feet. Part of the wastes have been covered by land fill.

Organics could possibly be a very small amount in the waste estimated at less than 0.5%.

## J Signature and Title:

The person or authorized representative (such as plant managers, superintendents, trustees or attorneys) of persons required to notify must sign the form and provide a mailing address (if different than address in item A). For other persons providing notification, the signature is optional. Check the boxes which best describe the relationship to the site of the person required to notify. If you are not required to notify check "Other".
